

# Healthcare services in Europe

## Version

0.9.12 (16/04/2020)

## General description

The European Social Charter<sup>1</sup> emphasizes the importance of healthcare services accessibility. EU Member States (MS) are obligated to have an adequate healthcare system which does not exclude parts of the population from receiving healthcare. However, access to healthcare is difficult to measure without a detailed methodology for collecting, harmonizing, and maintaining a pan-European register of healthcare services. This dataset results from an integration of official data sources from Member States, with the location of services as a minimum information. Additional information is included when available (see **attributes** below). Reliable pan-European geospatial datasets for EU institutions are required to further develop GI capacities at EU level, and an important step in reducing inequalities across the EU.

The dataset contains information on main healthcare services considered to be 'hospitals' by Member States. The definition varies slightly from country to country, but roughly includes the following: *"Hospitals' comprises licensed establishments primarily engaged in providing medical, diagnostic, and treatment services that include physician, nursing, and other health services to in-patients and the specialised accommodation services required by inpatients. Hospitals may also provide out-patient services as a secondary activity. Hospitals provide in-patient health services, many of which can only be provided using the specialised facilities and equipment that form a significant and integral part of the production process. In some countries, health facilities need in addition a minimum size (such as number of beds) in order to be registered as a hospital."*<sup>2</sup> In some cases, facilities without in-patient services may be included.

A variety of data sources are available at MS level with different quality criteria: level of detail, timeliness and update frequency, etc. This methodology aims to progressively build pan-European datasets from MS official data and maintain them in a sustainable manner. Different data sources could be selected depending on the needs and the cases but priority is given to data sourced from Health Ministries, or other official outlets indicated by Ministries. Data is semantically harmonised with a common (simple) schema. Production relies on automated processes: MS data are retrieved, combined, harmonised and updated automatically, as far as possible, using up-to-date techniques.

More information: [https://ec.europa.eu/health/sites/health/files/systems\\_performance\\_assessment/docs/com2014\\_215\\_final\\_en.pdf](https://ec.europa.eu/health/sites/health/files/systems_performance_assessment/docs/com2014_215_final_en.pdf)

## Contribution

Data provided may contain inconsistencies or inaccuracies. If you would like to contribute by suggesting alternative data sources or notice any issues, please contact [Eurostat user support](#).

## Attributes

Attribute	Datatype	Description
-----------	----------	-------------

id	text	The healthcare service identifier. This identifier is based on national identification codes, if it exists.
hospital_name	text	The name of the healthcare institution.
site_name	text	The name of the specific site or branch of a healthcare institution.
lat	double	Latitude (WGS 84).
lon	double	Longitude (WGS 84).
street	text	Street name.
house_number	text	House number.
postcode	text	Postcode.
city	text	City name (Sometimes refers to a region or municipality).
cc	text	Country code (2 letters, ISO 3166-1 alpha-2).
country	text	Country name.
emergency	text	'yes/no' for whether the healthcare site provides emergency medical services.
cap_beds	int	Measure of capacity by number of beds (most common).
cap_prac	int	Measure of capacity by number of practitioners.
cap_rooms	int	Measure of capacity by number of rooms.
facility_type	text	If the healthcare service provides a specific type of care e.g. Psychiatric hospital. This type is based on the national classification.
public_private	text	'private/public' status of the healthcare service.
list_specs	text ',' delim	List of specialties recognized in the European Union and European Economic Area according to the 2005 EU Directive (See Annex V) <sup>3</sup>
tel	text	Telephone number.
email	text	Email address.
url	text	URL link to the institution's website.
ref_date	date	The <a href="#">reference date</a> (DD/MM/YYYY) the data refer to. The dataset represents the reality as it was at this date.
pub_date	date	The publication date of the dataset by Eurostat (DD/MM/YYYY). This should be used to track when this Eurostat dataset has changed.
geo_qual	int	A quality indicator for the geolocation. 1: Good, 2: Medium, 3: Low, -1: Unknown
comments	text	Some additional information on the healthcare service.

## Geometrical representation and coordinate reference system

The locations are represented as point geometries with geographical coordinates (longitude, latitude) in WGS84 ([EPSG:4326](#)).

The position of a healthcare service is sometimes computed automatically from its postal address, using geocoding. This position might thus be inaccurate. The attribute *geo\_qual* documents the confidence level of this positioning.

## Geographical extent

EU and neighboring countries. The countries covered are listed in the table below ('Data sources' section) and on [this page](#).

## Update Frequency

The dataset is updated regularly as data coverage improves. Once considered complete, it will be updated annually.

## Download service

Eurostat website download page: <https://ec.europa.eu/eurostat/web/gisco/geodata/reference-data/healthcare-services>

Download space: <https://gisco-services.ec.europa.eu/pub/healthcare/>

API: [https://gisco-services.ec.europa.eu/pub/healthcare/<format>/<geo\\_code>.<format>](https://gisco-services.ec.europa.eu/pub/healthcare/<format>/<geo_code>.<format>) where **format** is the encoding format among {'*csv*', '*geojson*', '*gpkg*'} and **geo\_code** is the 2 letters country code, or '*all*' to retrieve all data.

## Encoding

The data is encoded in CSV, [GeoPackage](#) or [GeoJSON](#) formats. For a conversion in other GIS formats, you could use [GDAL](#). The character encoding is UTF-8.

## Licence

See the licensing conditions for every individual country in the table above, on the website of the provider.

## Quality assurance - validation

Comparison against Eurostat's dataset '[Hospital beds by NUTS 2 regions](#)' (hlth\_rs\_bdsrg) lead to good agreement for the countries AT, BE, IT, HU within the 10% confidence interval. An exception was noted for RO where further investigation is ongoing. It must be noted that data used for the comparison refers to the years 2019/2020, while data in Eurobase refers to the years 2017/2018.
